Unit – 4 : Session – 2 : SLO – 1 | Binary Trees

■ I. Fill in the Blanks

- A binary tree can have at most TWO children.
- The left and right children are known as the LEFT CHILD and RIGHT CHILD.
- A FULL binary tree has all nodes with either 0 or 2 children.
- A COMPLETE binary tree fills all levels except the last from left to right.
- A PERFECT binary tree has all internal nodes with 2 children and all leaves at the same level.
- PREORDER traversal visits the root before the subtrees.
- INORDER traversal visits the left subtree, then root, then right subtree.
- POSTORDER traversal visits the subtrees before the root.
- The DEPTH (level) of a node is its distance from the root.
- A LEAF has no children.
- The number of children of a node is called the DEGREE.
- A tree where all nodes are filled except possibly the last level is COMPLETE.
- The HEIGHT of the tree is the number of levels.
- A node's immediate descendant is called a CHILD.
- The link between two nodes is called an EDGE.
