Unit – 3 : Session – 9 : SLO – 2 | Types of Queues — Match the Following

■ I. Answers

- A. Linear Queue — 2. Basic FIFO structure
- B. Circular Queue — 13. Last position connects to the first
- C. Double-Ended Queue (Deque) — 11. Insertion and deletion at both ends
- D. Input-Restricted Deque — 9. Deletion at both ends, insertion at one end only
- E. Output-Restricted Deque — 12. Insertion at both ends, deletion at one end only
- F. Priority Queue — 10. Elements served based on importance
- G. Simple Queue — 15. Insertion at rear, deletion at front
- H. Static Queue — 3. Fixed size queue implemented using arrays
- I. Dynamic Queue — 1. Grows or shrinks using linked list
- J. Circular Deque — 14. Ends are connected and operations at both ends
- K. Single-Ended Queue — 8. Operation allowed at only one end
- L. Blocking Queue — 5. Used for inter-thread communication
- M. Non-blocking Queue — 7. Doesn't wait for operations to finish
- N. Monotonic Queue — 6. Maintains increasing or decreasing order
- O. Queue of Queues — 4. Nested queue structure (queue as elements)
