Unit – 1 : Session – 9 : SLO – 1 | Open Source Operating Systems — Rebuild the Message

■ I. Rebuilt Message

- Choosing the letters for each cell rebuilds the sentence:
- "LINUX IS A FREE AND OPEN SOURCE OPERATING SYSTEM."

■ II. Open Source Operating Systems — Definition and Examples

- Open source OS: operating system whose source code is freely available to study, modify and
- redistribute under an open license (GPL, BSD, Apache).
- Examples: LINUX (Ubuntu, Fedora, Debian), FreeBSD, OpenBSD, Android (AOSP), ReactOS, MINIX.
- Advantages: transparency, community support, no licence cost, customizability, security auditing.
